FullNumber: an innovative, prevention-based solution in equipment protection, exhibiting at the 2017 Web Summit

The FullNumber platform allows registration and tracking of equipment, ultimately aiming to put a stop to parallel markets and discourage illegal transactions.

FullNumber is a startup, designed to establish an universal platform for the registration of equipment that have an unique identifying code (serial number, IMEI, Chasis number, etc), aiming for prevention, security of equipment and other goods, and protection of ownership. This registration is as preventive as it is functional for the owner: once they register an equipment, the platform also allows the user to manage 'equipment events', for example, by keeping record and setting up reminders of important dates, as are insurance and warranty expiry dates and upcoming vehicle inspections. Therefore, be it eventualities or day-to-day concerns, these are only a few examples of what FullNumber can offer you.

After launching the online platform and the mobile APP for Android and iOS, FullNumber is in a stage of growth, construction of its user network and establishment of key partnerships to successfully meet its goals, and then surpass them.

FullNumber is one of the Portuguese startups, and the only one based in the Trás-os-Montes region, to be selected for the ALPHA programme at the 2017 Web Summit. This programme allows new exciting companies to exhibit, demonstrate and promote their product, in what we all know as 'largest technology conference in the world'.

Come see what FullNumber is all about, find us November 6-9 in Lisbon, or visit our website http://fullnumber.net/ .
